

MACAE's 2009 ANNUAL CONFERENCE

Minnesota
Association for
Continuing
Adult Education

The theme for our 34rd annual conference is

“Revealing the Secrets of the Brain— The New Science of Adult Learning”

As far back as ancient Greece, scholars, such as Aristotle, have tried to understand the enigma of the human brain and how we learn, think and reason. In the past thirty years, due to new technologies and research, many of our traditional ideas of brain activity and human learning have been shown to be completely untrue. What is emerging is a whole new science and understanding of a brain that is constantly growing neurons and able to learn new skills at every age. Exactly what is science teaching us? What are the implications for adult education and learning?

*MACAE's keynote speaker, **Professor Apostolos Georgopoulos**, award-winning researcher and director of the Brain Science Center at the University of Minnesota, will bring us up-to-date on the latest findings and their implications for adult learners and educators.*

MACAE's conference will also feature entertainment, practical CEU-based workshops and other opportunities for networking, learning and inspiration for every adult educator—and learner! Join us!

Friday & Saturday, November 13th-14th 2009

Minnesota Association for
Continuing Adult Education

Hubbs Center for Lifelong
Learning
1030 University Avenue West
Saint Paul, MN 55104

St. Thomas University -
St. Paul campus
